

Dear Customer,

As your occupational health provider we strive to continue a strong relationship with our valued clients. In an effort to provide these services efficiently, we would like to clarify any confusion while filling out the **Respirator Medical Clearance** form for your employees. This information is critical for the caregiver performing the respirator clearance for your employee.

The top of the form is to be completed by you, the employer:

1. The first information that is requested is the type of respirator that the employee is to wear. This is not the brand or model but whether it is **Air Purifying** or **Atmosphere Supplying**. There are selections under each of those categories as well.
 - a. An **Air Purifying Respirator** is a respirator with an air-purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air purifying element. Air Purifying Respirators are either Negative Pressure (half face or full face) or N95 Particulate Respirator. Canister respirators protect against certain fumes or gases. N95 Respirators capture particles but do not protect against fumes or gases. Positive pressure air purifying respirators include PAPR's. A PAPR (full face or hood) is a hood or full face with a hose that connects to a power pack worn on the person.
 - b. An **Atmosphere Supplying Respirator** is a breathing device that supplies the wearer with air from a source that is separate from the ambient air, such as from an air tank. Atmosphere Supplying types are Airline (continuous flow), SCBA (positive pressure, pressure demand), open circuit or closed circuit (rebreather), and Combined (airline/SCBA). In open circuit SCBA's, the exhaled air is discarded. This is the typical SCBA worn by fire fighters. In closed circuit SCBA's, the exhaled air is recirculated to provide longer use times. Airline (continuous flow) respirators are air-supplied respirators that make use of a hose to deliver safe air from a stationary source of compressed air. A Self-Contained Breathing Apparatus SCBA consists of a wearable clean-air supply pack.
2. **Level of Work Effort.** Level of work the employee will be doing while wearing the respirator. Choices are Light, Moderate, Heavy and Strenuous.
3. **Extent of Usage.** Will the employee be wearing the respirator on a daily basis? Occasionally, but more than once a week? Or rarely – or for emergency situations only.

4. Length of Time of Anticipated Effort in Hours. This is the length of time that the employee would be expected to wear the respirator.
5. Special Work Considerations. Complete this section if the employee would be wearing the respirator in high places, excessive temperatures, hazardous materials, wearing protective clothing, etc.
6. The final step is to sign the form. The line is titled Company Safety Representative with phone number. This should be who has completed the form.

The rest of the form is for care provider to complete. This form should accompany the **OSHA Mandatory Respirator Medical Evaluation Questionnaire**, which is to be filled out by the employee.

Bring these completed forms to your clinic visit. If you are mailing these forms mail them to the appropriate contact below:
